SHREYA GANESH VISPUTE

+91 7058057021 | shreyagvispute@gmail.com | LinkedIn | GitHub | LeetCode

Professional Summary

Computer Science undergraduate at VIT Vellore with a CGPA of 8.9 and experience developing full-stack applications using JavaScript, Node.js, Express.js, React.js, and MongoDB. Built real-time communication and data-driven web applications through internship and personal projects, collaborating with Git and GitHub workflows. Solved 250+ Data Structures & Algorithms problems on LeetCode.

EDUCATION

Bachelor of Technology, Computer Science and Engineering **2028**
Vellore Institute of Technology, VIT-Vellore (GPA: 8.90) *VIT-Vellore*

Technical Skills

Programming Languages: Java, JavaScript, Python, C++, Go, Scala
Frontend: React.js, HTML5, CSS3, EJS
Backend: Node.js, Express.js, REST APIs
Databases: MongoDB, MySQL, SQL
Libraries and Frameworks: Passport.js, Mongoose, Joi
Tools & Platforms: Git, GitHub, VS Code, Cloudinary, Artificial Intelligence
Core CS Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), RESTful Architechture, Computer Science Fundamentals
Software Development Practices: Software Development, Code Review, Test Coverage

INTERNSHIP EXPERIENCE

OverLoad Ware Labs AI (OwlAI) | *Full Stack Web Developer Intern* **Present**

- Developed Lumina, a real-time chat application using Node.js, Express.js, and Socket.io, delivering production software that enabled instant message exchange without page refreshes.
- Implemented WebSocket-based communication to support low-latency, bidirectional messaging across multiple chat rooms while applying software development and computer science fundamentals.
- Built and integrated frontend and backend components using HTML, CSS, JavaScript, and Express.js, delivering a seamless full-stack user experience.
- Designed room-based messaging functionality, allowing users to join dedicated chat channels and communicate in real time.
- Collaborated through Git and GitHub workflows, contributing to feature development, debugging, code review, and application improvements based on team feedback.
- Participated in testing and performance optimization, improving test coverage and application reliability to ensure smooth real-time communication.

PROJECTS

Elvo | GitHub

- Tech Stack: Node.js, Express.js, MongoDB, EJS, Chart.js, Yahoo Finance API
- Built a full-stack stock portfolio management platform with Node.js, Express.js, MongoDB, and EJS, enabling users to track investments, monitor watchlists, and analyze portfolio performance through a centralized dashboard.
- Integrated the Yahoo Finance API to retrieve real-time stock prices, market trends, and historical market data for portfolio analysis.
- Developed portfolio analytics including current portfolio value, profit/loss calculations, total holdings, and share distribution metrics.
- Implemented secure user authentication and session management to protect user-specific financial data.
- Designed watchlist and transaction management modules, allowing users to track stocks and maintain investment histories.
- Visualized portfolio allocation and stock performance data using Chart.js to provide interactive financial insights.

RoamStay | Live Demo

- Tech Stack: Node.js, Express.js, MongoDB, EJS, Passport.js, Cloudinary, Joi
- Built and deployed a full-stack accommodation booking platform using Node.js, Express.js, MongoDB, and EJS, enabling users to create, browse, update, and manage property listings.
- Implemented secure user authentication and authorization using Passport.js and Express sessions to protect user-specific actions.
- Developed RESTful APIs and complete CRUD functionality for listing management workflows, supporting backend operations across the application.
- Developed RESTful APIs and complete CRUD functionality for listing management workflows.
- Applied Joi-based server-side validation and MVC architecture to improve application reliability and maintainability.
- Utilized MongoDB and Mongoose for efficient storage and retrieval of user and listing data.

Lumina | GitHub

- Tech Stack: Node.js, Express.js, Socket.io, HTML, CSS, JavaScript
- Developed a real-time chat application using Socket.io and WebSocket technology, enabling instant message exchange without page reloads.
- Implemented room-based communication functionality, allowing multiple users to join dedicated chat channels and communicate simultaneously.
- Built full-stack frontend and backend components using Express.js and JavaScript to deliver seamless real-time interactions.
- Leveraged bidirectional WebSocket communication to provide low-latency message delivery and live updates.
- Designed a clean and responsive user interface focused on usability and real-time collaboration.

Achievements

- Solved 250+ Data Structures & Algorithms problems on LeetCode across Easy, Medium, and Hard difficulty.
- Completed Wells Fargo Software Engineering Job Simulation (Forage), working on data modeling and software engineering tasks in a simulated enterprise environment.
- Built and deployed multiple full-stack web applications, including a stock portfolio management platform, accommodation booking platform, and real-time chat application.

Certifications

- Oracle Cloud Infrastructure Certified AI Foundations Associate: 2026
- Wells Fargo Software Engineering Job Simulation (Forage): 2026
- Microsoft AI Skills Fest: 2026
- India Space Lab Technical Training Program: 2025
